MILESTONE-1

1. A screenshot of the application's home page displayed in your browser

2. Explanation of additional features, if any.

I have included below features in my application:

- Logo of the application
- Background Images as per activity
- Dropdown menu for application navigation (e.g. – About, Activity etc.)

3. Explanation of status, stopping point, and issues if incomplete.

Challenges:

- The major challenge was to come up with an idea that would be challenging and also feasible to implement.
 - The next major challenge was to create a homepage (especially Navigation Bar), which I had spent my most of the time on. However, I have learnt a lot while developing it and it worked as per my expectations.
 - I am still exploring the new features of HTML/CSS, which I will keep implementing in meantime.
4. Discuss the easy and challenging parts of the assignment. How did you overcome all or some of the challenges?
- As mentioned in the previous answer, homepage took most of the time while developing it. Navigation bar was quite confusing or rather complicated, but was not that hard.
 - Second page i.e. event_page ('classes.html' in my application), was interesting to implement because there I had to divide the page section-wise, and categorized the activities accordingly.
 - Overall, this assignment was very good to have hands-on HTML/CSS from scratch.
